Highlights

20 hot & iced drinks

The Philips Fully automatic coffee machine has 20 recipes to choose from, ranging from warming drinks like espresso, milky lattes and cappuccinos to cooling iced coffees. With a hot and iced coffee maker, you can look forward to refreshing beverages any time, without even leaving the house. We've calibrated our brewing system so that even our iced coffees have the same delicious flavour as hot drinks. You're guaranteed authentic coffee every time you brew.

LatteGo milk system

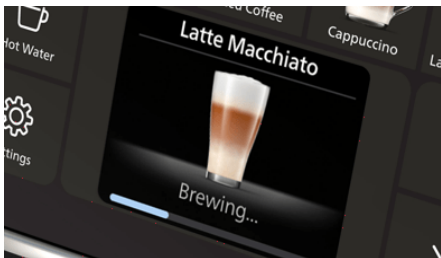

Our powerful LatteGo cyclonic frothing technology lets you create silky smooth milk froth at the touch of a button, even with plant-based milk alternatives.

SilentBrew technology

Our patented SilentBrew technology reduces the coffee machine's sound so you can enjoy the experience of brewing aromatic coffee more. Using sound shielding and quiet grinding, our machines make 40% less noise than earlier models and come with a Quiet Mark certification.

QuickStart

No more waiting for your machine to warm up. Our QuickStart function allows you to power on your machine and brew a coffee right away. Your machine will heat up based on the selected recipe.

Intuitive display

Our easy-to-use, intuitive display is your place to select a recipe, and adjust the strength, coffee length and milk volume. Want to save your preferences? Save your drink in one of four user profiles.

Perfect temperature and aroma

Our Aroma Extract system finds the ideal balance between temperature and aroma by keeping the water temperature between 90°C and 98°C, all while regulating the water flow rate.

The fastest to clean milk system*

With just two parts and no tubes, our milk system can be cleaned in under 10 seconds, in the dishwasher or under a tap. Philips doesn't offer automatic cleaning as it requires complementary cleaning.

100% ceramic grinders

Bring out the full flavour of your beans with our hardwearing ceramic grinder. Fine-tune the grind size using one of 12 settings, from fine to coarse.

Add an extra shot

Enjoy more flavour without the bitterness by using our extra shot function. You can add it to any of our coffee recipes, except when using the pre-ground function.
