

Draw and write like on paper with Paperlike Screen Protectors.

With Paperlike you can reduce muscle fatigue caused by writing on a glass tablet, and make your iPad feel just like a notebook. All while keeping the convenience of digital.

 Paperlike

PL2A-13-24 (for iPad Pro 13" (M4, 2024))

**RRP Inc:** \$59.99

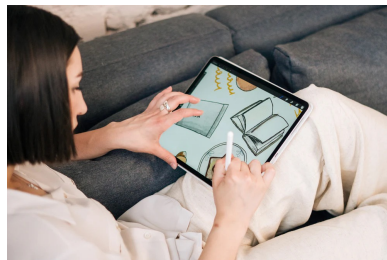

### Papery feel. Proprietary tech.

Love writing and drawing in a traditional medium?

Paperlike uses small micro-beads — called Nanodots — to emulate the friction and resistance of premium paper as you drag your stylus across the surface of your iPad.

This haptic feedback helps to improve stroke accuracy while you work. It's a difference you can feel.

### Say goodbye to slippage.

Naked iPad screens are great for viewing but terrible for working with a stylus.

Glass provides no resistance while you write. Even if you try to control your strokes, you'll end up with sloppy notes and messy lines.

Paperlike puts an end to all of that by adding resistance to your screen, helping you create neater strokes and straighter lines.

### Stunning screen clarity.

Traditional matte screen protectors are notorious for creating a cloudy display.

To create the latest revision of Paperlike, we partnered with leading plastics manufacturing companies to minimize refractions and blurring.

The result: A matte screen protector that changes the way you work . . . without changing what you can see.
